

# When to Hire a Plumber

Russell  
Craig

Forgetting a needed plumbing repair for too long can possibly create major troubles to ones home. There are specific plumbing upkeep and installation projects that are should be delegated to an expert plumber to handle. We would love to discuss just what those times are below, so Garland TX residents have a fine understanding of what ought to be delegated to us.

## Utilize a Licensed Garland Plumber for the Following Plumbing Tasks

### When a Toilet Backs Up Into a Bathtub or Shower

When this occurs, the problem is more than likely caused by a clog in the main sewer line. We have the correct tools and have the correct training to carry out the needed sewer cleaning. It is not as straightforward of a repair as putting a drain cleaner liquid right into the toilet. A qualified plumber needs to be the one to complete this job.

### When the Residence Has Low Water Pressure

There are lots of reasons why ones residence could have low pressure. The overall plumbing system of a house produces a delicate balance in pressure. When it becomes imbalanced, there is typically a clog or pipe break that is triggering the pressure to become out of balance. Whatever the concern might be, our plumber personnel can recognize the issue and fix it prior to the clog starts to trigger other issues besides [pressure imbalance](#).

### When Changing a Hot Water Heater

We have actually seen way too many home owners inaccurately put in a water heater themselves over the years. We invest a great deal of our time dealing with plumbing installations that house owners could not complete or complete incorrectly. Our personnel has a bunch of training to make sure they are current using the appropriate approaches of setting up hot water heaters. An improper setup can create health hazards if they are not vented properly, just to offer one example. We will certainly have the ability to get rid of the old water heater appropriately too.

According to Reuben Saltzman of Structure Tech Home Inspections:

*Backdrafting at a water heater is a common defect identified during home inspections, and it's almost always a condition that the homeowner or occupant is not aware of. This happens when the exhaust gases from an atmospherically vented water heater spill out into the room, rather than safely leaving the house through the vent. Exhaust gases contain carbon monoxide and high levels of moisture, so*

*this is always a condition that should be corrected. <http://structuretech1.com/2013/09/water-heater-backdrafting-signs/>*

## **When a Fixture Replacement or Repair Is Required**

This topic can be debated we know, relying on the ability level of a home owner. Many homeowners might not be as “handy” as they believe themselves to be. When installing a new plumbing fixture, it does call for exact fittings. If the replacement fixture is not set up properly, plumbing leaks can create gradually and trigger a substantial quantity of damages within a residence.

## **When Replacing Pipes**

Pipes will break or wear gradually we know. We have actually needed to rescue numerous residents who begin with just what they feel will certainly be an easy water pipe substitute, but develops into a much bigger problem. If an older pipe creates a break or fracture in it in one area, possibilities are it will certainly be easy for it to do so in other places also. During reducing or unscrewing a pipe installation, it can be simple to cause a break in one more part of the pipe. It is advisable to enable us making sure the whole part of pipe is changed, and to make certain there will certainly be no leaks in the brand-new pipes and installations also.

## **Garland Plumbing Preventative Maintenance Homeowners Ought to Do**

There are numerous Garland residential plumbing preventative upkeep tasks property owners can and should do. We have actually written about a lot of them [here](#). However, one of the very best points one can do is to make positive they are aware of everything that goes into all the drains at home. Appropriate [drain](#) upkeep and treatment is essential in producing a well running plumbing system that will last for several years. Without doing so, one will certainly have the expense of unexpected emergency drain cleanings, sewer cleanings, and obtaining the [septic system](#) pumped (if the home has a septic system). There are certain water heater maintenance actions that have to be done yearly too, which we will be covering shortly.

These are the primary residential plumbing jobs that are advisable delegated to us to take care of. If at any kind of point during any kind of plumbing maintenance you really feel unpleasant or not sure of exactly what to do, do not think twice to get in contact with us. We recognize that you may be attempting to save some money by doing the plumbing task on your own, however when unsure, give us a call. Specific jobs, like working on a [water heater](#), could nullify the service warranty if a licensed plumber is not the person doing the repairs or maintenance.
